Profile

Dynamic Automation Lead with over 14 years of experience driving efficiency in testing environments. Demonstrated expertise in Python has facilitated the successful implementation of automated testing frameworks, significantly enhancing the testing process. Proven leadership skills have been leveraged to oversee diverse teams and projects, ensuring timely delivery and quality outcomes. Committed to continuous professional development and eager to contribute to impactful automation solutions in future roles.

Work Experience

Hexagon India Pvt Ltd, Bangalore

April 2011 — August 2013

Worked as Software Engineer

Dear Born Electronics, Bangalore

September 2013 — March 2015

Worked as a Embedded Test Engineer

Capgemini, Bangalore

April 2015 — December 2018

Citus Tech, Bangalore

January 2019 — January 2020

ValueLabs, Hyderabad

January 2020 — Present

Hobbies

Driving, Dance, and playing Guitar, Writing short Scripts and Poetry

Employment History

Automation Lead, Shutterfly, Hyderabad

January 2021 — Present

In the role of Automation Lead at ValueLabs, a focus on driving automation initiatives across various projects such as Life-touch Ripple and Salesforce has been paramount. Responsibilities include overseeing the automation strategy, mentoring junior team members, and ensuring the successful execution of automated test scripts. Key contributions have been made towards enhancing the testing process and improving overall project efficiency.

- Led a team in developing a comprehensive automation framework, resulting in a 40% reduction in testing time.
- Implemented best practices for test automation, significantly improving test reliability and coverage.
- Collaborated with cross-functional teams to integrate automated testing into CI/CD pipelines.
- Provided training and support to team members on automation tools and methodologies.

Automation Test Engineer, UMobile

January 2020 — December 2020

As an Automation Test Engineer at UMobile, responsibility encompassed creating automated test cases for various applications to ensure functionality and performance. The role involved working closely with developers to understand requirements and translating them into comprehensive test scenarios. This position provided valuable insights into the challenges of mobile application testing.

- Developed and executed automated test scripts using Selenium, enhancing the testing process.
- Participated in requirement analysis and provided feedback on testability.
- Documented test results and reported issues, facilitating better communication with development teams.
- Contributed to the overall quality assurance process by continuously improving testing methodologies.

Automation Engineer, GE HelathCare, Bangalore

January 2019 — January 2020

This project is about Central Station Monitors wherein the nurses in a single monitor view Multiple Bedside monitors of different patients. Testing involves verifying how Central Stations monitors communicate with Bedside through a dedicated network and how Patient reports are sent to Electronic Medical Records.

Roles & Responsibilities:

- Prepare the Automation Test Plan based of ROI and High-Level Assessments; Man efforts in time
- estimation including Reusable components, Validation, Test Data file Creation and

- Documentation, Demo section.
- ☐ Automate test step flow in each functional test case using Python Script in Test complete.
- ☐ Perform regression testing with help of competed scripts- multiple regression suits by executing
- as on whole or on given scope.
- ☐ Arrange the weekly project status meeting with Client and interact with them during demo
- session after completion of each functional test scripts.

Consultant , Capgemini, Bangalore

April 2015 — December 2018

Credit one is a credit derivative trading application which is used by various divisions of Morgan Stanley like

Corporate Credit, Structured Credit, Emerging Markets groups for trading Credit Derivative products like

Credit Default Swap, Bond, ABS Default Swap etc., by creating, managing the life cycle of the trades.

Embedded Test Enginner, Dear Born Electronics, Bangalore

June 2013 — March 2015

This project involves development of Library to develop the next generation DTMs using WPF and MVVM architecture

.DTM 600 Library supports FDT 1.2 / 1.2.1 version. HART and Profibus DTMs can be developed with this library

Roles & Responsible:

- ☐ Understanding the requirements
- ☐ Manual and Automation test case preparation
- ☐ Testing DTM600 library and Device DTM using Pactware and fdtContainer.

- ▯ Automation of DTM test cases and Executing the test cases for each iterations
 - ▯ Conducted Functional, performance Testing (Manual and Automation Testing)
 - ▯ Defect Management using Microsoft Test Manager Preparation of Test Plan, Test Cases, Test Reports
- using Microsoft Test Manager

Software Engineer, Hexgon India Pvt Ltd, Bangalore

April 2011 — August 2013

This the Advance version of Prosystem Taxation product and its mainly implemented UI changes, for CA's. The entire

product now user friendly to the Customer with existing functionality. And here added new features like applying

Digital signature for clients, standalone application implementation for broad use and additional field added helpful for

CA's. And the description for the product is helpful for chartered accountant, where he can file returns for single

Individual or a group or an organization in a convenient manner. Earlier the chartered accountant use to file Returns

manually, which might be error prone and it was very difficult to maintain files (which are set of handwritten paper).

This product helps CA to store files electronically which is less error prone, as most of the work is automated.

Roles & Responsible:

- ▯ Understanding the business requirements and developed test cases to test the complete functionality
- of the application.
- ▯ Test scripts were executed to check the functionality of the application.
 - ▯ Developed the Test Requirement from FSD.
 - ▯ Participated in Meeting, Walkthrough and interact with Development & Business team.
 - ▯ Implement Testing plan used MPP and Excel

Education

Bachelor of Technology, SVVSN Engineering College
